

Summary based on specified goals for the workshop

- **Goal 1: Give an overview of relevant eco-labels**

Informative presentations from MSC, KRAV/Debio, ASC and Icelandic label. Label owners also gave views on future trends with respect to label content and scope. Reports with the goal of presenting main properties of today's labelling schemes was also presented, at the same time retailers pointed out that how the labels work (business-to-business or business-to-customer) needs to be clarified better in these reports.

- **Goal 2: Discuss if future label requirements should have a more holistic approach**

Both researchers, label owners and retailers agreed on that labels should and will change in content and scope in the future. While labels today mainly focus on sustainability of fish stocks, other dimensions will be included later (e.g. climate impact, social issues, etc.).

- **Goal 3: Discuss if future eco-labels should have standardized minimum criteria**

Several speakers agreed that standard minimum criteria can contribute to a more clear labelling regime and better understand among both industry and consumers. One even suggested that ISO can make standards for eco labelling.

- **Goal 4: Discuss if future eco-labels should have more quantitative criteria, and if traceability can improve transparency and trust (e.g. IUU)**

Several speakers asked for more specific criteria and actions that can make eco-labels more trustworthy. Traceability was mentioned as one very relevant solution to ensure transparency and trust.

- **Goal 5: Discuss how eco-labels can play a more active role in development and implementation of environmentally oriented technology**

Some eco-labels require use of selective gear in the fishing operation. However, this topic was not well covered during the workshop. It would be of great interest to discuss this further with label owners. Can we imagine a system where labels are indifferent with respect to gear type as long as user can document minimum environmental impact from gear.

- **Goal 6: Extend our network within eco-labelling and traceability, and establish a dynamic forum for future co-operation and influence**

With around 100 very enthusiastic participants the workshop has established potential expert network for further discussions and developments. Many persons have already showed great interest for a next workshop.
